K22-1255 Threaded Dome Sidemount Handle

Tools Needed:

3/32" Allen Wrench

Large Pliers Or Channel Locks

Removal of the Handle
1. Always turn your water supplies off before disassembling your faucet. With the supplies turned off, move your faucet's handle to the "on" position to relieve pressure.

2. Insert the 3/32" Allen wrench into the hole in the handle on the side opposite the lever. Unscrew the Allen screw only until the handle will slide off. This screw does not need to be fully removed.

Special Notes for Removing the Allen Screw

Note 1: In some cases, accessing the hole in the handle might require loosening the faucet under the sink and rotating the body of the faucet.

Note 2: Some models may have a small round plug/cap covering the handle hole which will need to be removed before using the 3/32" Allen wrench.

3. Unscrew the handle hub to remove.

4. If you need to install a new 1255 cartridge, please move to step 5. If you only need to install a new handle, reverse...
steps 3 through 1 to install the new handle.

Removal of the Cartridge

5. Using large pliers or Channel Locks, unscrew the cartridge nut counterclockwise and remove.

6. Grab the silver metal stem of the cartridge and slide this out of the faucet.

Installation of the Cartridge
7. View the 1255 cartridge to find the small tabs protruding. Look into the metal chamber of the faucet to find the location of the three large grooves. These grooves will accept the small tabs protruding from the cartridge.

8. Insert the 1255 cartridge into the metal chamber making sure to line up the three tabs with the grooves.

9. Using the grey assembly tool (if available) or a wrench, tighten the cartridge nut until snug. Next turn an additional 90 degrees to fully secure the nut.
Installation Tool 118305

10. Screw the handle hub back on to the faucet.

11. Slide the handle back on and tighten the Allen screw.
12. Turn the hot and cold water back on.

You are all done!
